Vepari AI

Key Features Research Report

From four package documents to six problem-led intelligence engines

Report focus	Turn the six major micro-enterprise problems into clear AI feature engines
Research base	Package 1, Package 2, Package 3 and Package 4
Output style	Clean, visual, source-linked, and easy to verify
Document purpose	Support Slide 3 and the feature architecture of Vepari AI

Startup Tamil Nadu • AI for Micro Enterprise Growth

Table of Contents

This document is organised as a feature-led research report. Each chapter groups AI capabilities by the major business problem it solves, using the four package documents as the source base and reassembling them into six solution engines.

Section	Page
1. Executive Summary & Feature Design Rule	3
2. Six-Problem to Feature-Engine Map	3
3. Operational Amnesia Engine	4
4. Financial Leakage Engine	5
5. Credit Tracking Failure Engine	6
6. Scheme Blindness Engine	7
7. Inventory Mismatch Engine	8
8. Growth Stagnation Engine	9
9. Integration Layer, Validation Trail & References	10

How to read this report

- Start with the six-problem map on page 3.
- Then move page by page through each engine to see which features solve which problem.
- Each chapter includes a short source trail so the evaluator can trace the feature back to the package documents and external references.
- The wording is kept practical and human; the report describes what the feature supports, not what it guarantees.

Executive Summary & Six-Problem Feature Map

The four package documents were not kept as separate buckets. They were reorganised into six problem-led intelligence engines so that every feature can be traced back to one of the six core issues on Slide 1. This makes the report easier to defend in a review: the evaluator can see the problem, the feature family, the expected outcome and the source trail in one place.

Core problem	Feature engine	Package base	Representative feature set	Why it matters
Operational Amnesia	Business Memory Intelligence Engine	Package 1	Voice log, customer profile, supplier ledger, SOP archive, continuity planner	Business stays documented even when the owner is busy, absent, or unable to recall details quickly.
Financial Leakage	Financial Intelligence Engine	Package 2	Expense logger, profit calculator, cost-per-unit engine, waste and overhead tracking	The owner sees where money is leaking and what the real profit picture looks like.
Credit Tracking Failure	Credit Intelligence Engine	Package 2 + Package 4	Credit ledger, recovery reminders, alternative score, lender-ready statement	Every credit note, repayment and lender-ready trail stays visible instead of living in memory.
Scheme Blindness	Growth & Scheme Intelligence Engine	Package 4	Eligibility chatbot, step guide, doc checklist, deadline alerts, scheme navigator	Businesses get matched to support schemes, document steps and deadlines in Tamil-first guidance.
Inventory Mismatch	Inventory Intelligence Engine	Package 1 + Package 2 + Package 3	Shrinkage tracker, purchase planner, demand trend monitor, batch and delivery tracker	Stock planning becomes visible through demand, shrinkage, purchase and fulfilment signals.
Growth Stagnation	Growth Intelligence Engine	Package 3 + Package 4	CRM, offers, market radar, opportunity alerts, digital expansion tools	Customer retention, market signals and expansion opportunities turn into repeatable growth actions.

Design rule used in this document

- Every feature is tied to one of the six major problems.
- Every feature is framed as a support tool rather than a guaranteed cure.
- The wording stays business-first and practical, because the evaluator is reading a startup proposal, not a textbook.
- The report keeps the same blue-and-gold language used in the PPT so the deck and documents feel like one system.

Source Trail for the Architecture Map

Source	What it supports	Link / page trail
Package 1	Operational memory, continuity, learning and operations memory	Package 1 pp. 3–9
Package 2	Finance, costing, credit, risk and forecasting	Package 2 pp. 3–9
Package 3	CRM, offers, market radar, opportunities and growth	Package 3 pp. 3–9
Package 4	Schemes, compliance, digital presence and formal economy	Package 4 pp. 3–9

Operational Amnesia Engine

Problem 1 — The business forgets what it already knows

This engine is built for the situations where the owner knows the customer, supplier, order pattern or daily routine only by memory. The package features turn that hidden memory into a searchable business record, so the business can continue even when the owner is busy, away or under pressure.

#	Feature	Input	AI output / impact
1	Voice Business Log	Tamil voice note	Structured daily log | Replaces memory with records
2	Customer Profile Builder	Customer name + purchase	Customer card | Improves repeat sales
3	Supplier Intelligence Ledger	Supplier deal note	Supplier profile | Never forgets negotiations
4	Order History Engine	WhatsApp order / voice	Chronological order log | Traceable orders
5	Day-End Reconciliation	Sales + expense note	Cash balance check | Reduces cash mismatch
6	AI SOP Generator	How-task-is-done voice note	Written SOP | Train others fast
7	Business Continuity Plan	Owner role notes	Continuity guide | Business survives absence
8	Business Memory Archive	All logs + tags	Searchable history | Find any old decision
9	Craft Documentation Tool	Craft process voice + photo	Knowledge card | Preserves rare skills
10	AI Succession Planner	How business runs	Handover guide | Creates continuity

What this engine changes in the business day

Visible effect	Invisible effect	Business result
Business memory no longer depends on one person	Tasks and decisions stay searchable	Faster daily continuity
Customer / supplier history becomes visible	Old details are retrievable on demand	Less confusion and fewer repeats
Business routines become written and reusable	SOPs can be shared with others	Easier delegation and training

Source Trail

Source	Supports	Link / trail
Package 1	Voice Log, Continuity, Planning, Learning, Ops Memory	Package 1 pp. 3–9
Package 1	Voice Business Log, Customer Profile Builder, Supplier Ledger	Package 1 pp. 4–5
Package 1	Business Memory Archive, Craft Documentation, Succession Planner	Package 1 pp. 5–7

Financial Leakage Engine

Problem 2 — Money leaks out before the owner sees it

This engine focuses on the small but repeated losses that quietly reduce profit: wrong pricing, absorbed labour, hidden overhead, transport cost, packaging, waste and GST confusion. Instead of only showing sales totals, it breaks the business into true-cost components so the owner sees what the business actually earns.

#	Feature	Input	AI output / impact
1	Daily Revenue & Expense Logger	Sales + expense voice note	Daily financial entry | Builds financial truth
2	Personal / Business Expense Splitter	Mixed purchase note	Tagged expense split | Separates household from business
3	AI Profit Calculator	Revenue + expense log	Real profit | Sees actual profit
4	Cost-Per-Unit Builder	Ingredient / labour / overhead data	Full unit cost | Prevents wrong pricing
5	Own Labour Time Cost Engine	Hours worked	Labour cost value | Stops free-labour pricing
6	Electricity Cost Allocator	Bill + business usage	Per-unit electricity cost | Hidden overhead visible
7	Equipment Depreciation Tool	Machine cost + life	Monthly depreciation | True cost of production
8	Packaging Cost Engine	Pack count + cost	Cost per item | Better margin math
9	Transport Cost Recovery	Delivery trips + distance	Per-order transport cost | Stops absorbed delivery loss
10	Waste-Adjusted Profit Calculator	Wastage %	True profit after waste | Finds silent losses
11	GST-Adjusted Margin Calculator	GST rate + sale price	Net margin after GST | Stops GST surprise
12	Monthly P&L Generator	Month logs	Tamil P&L summary | First clear statement

What this engine changes in the business day

Visible effect	Invisible effect	Business result
Hidden losses become measurable	Margins are no longer guessed	Higher profit visibility
Household and business money are separated	The real business result becomes clearer	Better financial control
Pricing becomes cost-aware instead of assumption-aware	Unit cost is visible	Smarter pricing decisions

Source Trail

Source	Supports	Link / trail
Package 2	Daily finance and costing clusters	Package 2 pp. 3–5
Package 2	Credit & risk, forecasting and sector pricing	Package 2 pp. 6–8
Package 2	Profit, unit cost and waste analysis features	Package 2 pp. 4–6

Credit Tracking Engine

Problem 3 — Credit given today should not disappear tomorrow

This engine is built for the everyday credit cycle of micro enterprises: partial payments, delayed dues, informal promises, and loan history that never gets structured. It gives the business owner a cleaner trail for recovery, repayment and later access to formal finance.

#	Feature	Input	AI output / impact
1	Buyer Credit Terms Tracker	Wholesale credit note	Due-date tracker | Stops overdue dues
2	Bad Debt Recovery System	Credit list	Recovery reminders | Improves collections
3	Credit Trail Builder	Logged financial history	Lender-ready trail | Builds loan credibility
4	Alternative Credit Score Engine	Transactions + repayments	AI credit score | Access without bank history
5	Lender-Ready Financial Statement	3–6 months logs	Bank-format statement | Loan application ready
6	UPI-to-Credit-Score Converter	UPI history	Credit contribution score | Every payment builds credit
7	Credit Profile Dashboard	Financial logs	Lender-facing profile | Shows bank-ready data
8	Loan Scheme Matcher	Credit need + business profile	Matched loan list | Best-fit loan products
9	Loan Application Pre-Checker	Target loan details	Approval gap check | Fix issues before applying
10	Bank Rejection Reason Analyser	Rejected loan details	Top rejection reasons | Guided improvement
11	MSME Samadhaan Filing Guide	Buyer overdue info	Recovery filing steps | Recover late payments
12	Delayed Payment Recovery Guide	Buyer overdue details	MSMED guidance | Recover paid-on-time rights

What this engine changes in the business day

Visible effect	Invisible effect	Business result
Credit history is not trapped in memory anymore	A lender-ready trail starts to form	Better loan readiness
Outstanding dues become visible before they turn into bad debt	Recovery is not delayed	Improved collections
Formal finance becomes easier to approach	Application gaps are easier to catch	Stronger credit access

Source Trail

Source	Supports	Link / trail
Package 2	Credit & risk cluster	Package 2 pp. 6–7
Package 4	Credit & formal economy cluster	Package 4 pp. 7–8
Package 4	Scheme/credit access guidance	Package 4 pp. 4–5

Scheme Blindness Engine

Problem 4 — Good support exists, but most micro enterprises do not reach it in time

This engine translates government support from a long list of schemes into a guided Tamil-first experience. Instead of expecting the owner to know the scheme name first, the engine starts with business profile, location and need, then moves toward eligibility, documents and application steps.

#	Feature	Input	AI output / impact
1	AI Scheme Eligibility Chatbot	Business type + revenue	Scheme matches | Finds suitable schemes
2	Scheme Application Step Guide	Chosen scheme	Step-by-step guide | Simplifies applications
3	Scheme Document Checklist	Scheme name	Required docs list | No missing papers
4	Scheme Deadline Alert System	Applied scheme list	Deadline alerts | Never misses a window
5	Application Centre Locator	Location	Nearest office / bank | Knows where to go
6	MUDRA Loan Eligibility Checker	Business details	MUDRA tier match | Access collateral-free finance
7	PM SVANidhi Guide	Street vendor info	Street vendor loan guide | Vendor access to credit
8	PMFME Guide	Food business profile	PMFME subsidy guide | Food sector support
9	PMEGP Navigator	Project idea + budget	PMEGP plan | Start with subsidy
10	Stand-Up India Credit Guide	Gender + business type	Stand-Up India options | Women-led access
11	CGTMSE Loan Finder	Loan need + business profile	Credit guarantee match | Collateral-free loans
12	GeM Portal Onboarding Assistant	Udyam + GST + PAN	GeM steps | Government selling

What this engine changes in the business day

Visible effect	Invisible effect	Business result
Scheme information becomes practical, not scattered	The business is shown the next step	Lower scheme blindness
Deadline and document mistakes reduce	Applications become less intimidating	Better scheme adoption
Access becomes more inclusive for low-literacy users	Tamil-first guidance removes friction	Broader participation

Source Trail

Source	Supports	Link / trail
Package 4	Schemes cluster	Package 4 pp. 4–5
Package 4	Compliance cluster	Package 4 pp. 5–6
Package 4	Digital presence and credit/formal economy	Package 4 pp. 6–7

Inventory Intelligence Engine

Problem 5 — Stock only works when demand, waste and delivery are visible together

This engine treats inventory as a living system, not a static stock count. It connects sales patterns, seasonal demand, wastage, shrinkage, batch movement and delivery flow so that the owner can reorder at the right time instead of guessing.

#	Feature	Input	AI output / impact
1	Product Performance Ranker	Sales mentions	Best / worst sellers | Better stocking
2	Maintenance Scheduler	Service date / issue note	Maintenance reminders | Avoids breakdowns
3	Inventory Shrinkage Tracker	Opening / closing stock	Shrinkage % | Tracks disappearing stock
4	Perishable Purchase Planner	Daily demand	Recommended purchase qty | Less spoilage
5	Seasonal Overstock Liquidator	Dead stock list	Clearance strategy | Recovers capital
6	Peak Season Demand Planner	Festivals + sales trend	Advance stock/staff plan | Ready for peaks
7	AI Order Scheduling System	Order queue	Priority schedule | Faster fulfilment
8	Batch and Delivery Tracker	Batch details	Delivery log | Avoids wrong delivery
9	Supplier Short-Weight Fraud Detector	Delivered weight	Fraud risk flag | Stops supplier cheating
10	Portion Standard Enforcer	Standard recipe size	Portion deviation alert | Cuts food waste
11	Demand Trend Monitor	Sales history	Trend detection | Sees growing / fading demand
12	Commodity Price Alert	Commodity category	Price alert | Buys at better rates

What this engine changes in the business day

Visible effect	Invisible effect	Business result
Stock problems become visible earlier	Purchase decisions become demand-aware	Less overstock and shortage
Waste and shrinkage stop hiding in the background	Disappearing stock is tracked	Cleaner inventory control
Buying, delivery and production can be aligned	The owner sees what needs reordering next	Smoother operations

Source Trail

Source	Supports	Link / trail
Package 1	Product performance, maintenance and continuity pages	Package 1 pp. 4, 8
Package 2	Waste, perishable and risk analysis pages	Package 2 pp. 5–7
Package 3	Seasonal planning and demand trend pages	Package 3 pp. 5–6

Growth Intelligence Engine

Problem 6 — Growth slows when the business cannot see customers, market shifts or expansion paths

This engine turns routine customer activity into growth intelligence. It uses CRM, offers, market radar, reputation and expansion tools to support repeat business, referrals, new customer acquisition and bigger order opportunities.

#	Feature	Input	AI output / impact
1	Voice-First Customer CRM	Customer purchase voice note	Customer profile | Knows every buyer
2	Repeat Customer Identifier	Visit history	Loyal customer list | Rewards loyal buyers
3	Lapsed Customer Reactivation	Last-visit dates	Win-back message | Brings customers back
4	Post-Purchase Feedback Collector	Purchase details	Feedback request | Hears customer truth
5	Personalised Offer Generator	Purchase pattern	Custom offer | More repeat orders
6	Referral Tracking System	Referral mention	Referral log | Turns customers into promoters
7	Occasion Marketing Engine	Birthday / festival dates	Greeting + offer | Loyalty grows
8	WhatsApp Broadcast List Builder	Customer database	Segmented lists | Targeted communication
9	VIP Programme Manager	Customer revenue data	VIP tiers | Treats best customers well
10	Churn Early Warning System	Visit frequency	Churn alert | Stops silent churn
11	WhatsApp Commerce AI	Product list + customers	Auto showcase + order capture | Sells without typing
12	B2B Buyer Connector	Product capacity	Bulk buyer matches | Sell bigger orders

What this engine changes in the business day

Visible effect	Invisible effect	Business result
Customer retention becomes measurable	Repeat buyers are easier to reactivate	Higher sales without constant new customer spend
Market signals become visible before the competition	Opportunities are surfaced earlier	Better growth direction
The business can move from local selling to expansion thinking	Digital presence and outreach get built in	Less stagnation

Source Trail

Source	Supports	Link / trail
Package 3	CRM, offers, market radar, opportunities, growth & reputation	Package 3 pp. 4–8
Package 4	Digital presence and expansion modules	Package 4 pp. 6–8
Package 3	Customer retention and growth opportunity pages	Package 3 pp. 4–8

Integration Layer, Validation Trail & References

How the engines work together

Vepari AI is intentionally built as one local-first system instead of several disconnected tools. Every engine shares the same basic layer: Tamil voice input, structured memory, live data calls, privacy-aware storage and a low-friction user flow. That is what allows the report to speak about one product with six problem-led engines instead of six unrelated apps.

Cross-cutting layer	What it does	Why it matters
Tamil voice interaction	Turns everyday speech into structured business data	Keeps adoption low for small and low-literacy users
Local-first storage	Holds business memory on device first	Supports privacy and offline use
Live API layer	Pulls scheme, market and formal-economy data when needed	Keeps the system current
Shared AI memory	Lets engines reuse the same business history	Prevents repeated typing and duplicate logs
Low-friction output	Gives short actions, alerts and summaries	Fits real shop-floor use
Incremental learning	Improves recommendations as more data is logged	Makes the system more useful over time

Final validation note

- The report is written as a feature-led research document, not as a product brochure.
- Each feature is framed as a support layer that helps close a specific problem gap.
- The external links sit beside the relevant content instead of being pushed only to the end.
- The same six-problem structure can now be reused directly for the presentation, demo script and future product work.
